

Meta cluster for exporting breeding animals to new markets (BreedExpo)

Programme Priority: P1 Competitive economy

Programme Specific Objective: 1.3. More exports by the Central Baltic companies to new markets

Sub-programme: Central Baltic

Duration: 01.04.2019 - 31.01.2022

Total funding: 739.392 EUR

ERDF funding: 583.589 EUR ERDF

Project Summary:

Estonia, Latvia, and Finland are highly skilled in breeding cattle animals especially in bigger farms - they are actively working on improving livestock quality. For them, entering new export markets would have a positive impact to the development of the dairy and beef cattle breeding sector as an increasing number of exported heifers would give an additional income for dairy and beef farmers as well as it would promote genetic diversity in livestock.

The project BreedExpo aims at supporting agricultural producers from Estonia, Finland, and Latvia to export breeding animals, to Kazakhstan, Georgia and Ukraine. A cluster-based approach will be used to establish a cooperation between existing networks of farmer organizations, project partners and national/sectoral breeding associations. In total, ca 40 agricultural producers will be involved in the project activities.

It is expected that within one year after the project completion, at least 1 sales transaction will have taken place in each target market - one sales transaction means that 100 or more animals from larger group of farmers have been bought by local intermediary organizations (breeding associations, farmers cooperatives or similar) and sold to target markets.

Project result in category - New cluster co-operation exporting to new markets

BreedExpo helped agricultural producers enter new markets

The main objective of BreedExpo project was to support agricultural producers from CB area, who are interested in exporting breeding animals, to enter into new markets: Kazakhstan, Georgia and Ukraine.

Cooperation between farmers' organisations and joint actions enabled to get more attention and higher interest in new target markets, and to optimize the costs of marketing activities. As CB markets and individual farms are quite small compared to selected target markets, it is quite difficult for individual farmers to make deals and get sales. Working together and making joint sales contracts allows to meet needs of big farms in Kazakhstan, Georgia or Ukraine.

As a result of the project a strong cluster cooperation was established involving ca 600 farmers and 8 breeding and export companies and associations from project area. 36 farmers participated actively in export activities (contact visits to target markets, participation in agricultural exhibitions). Ca 100 farmers sold their cattle through local intermediary organisations to 3 selected target markets during project implementation period: 27 deliveries were organised to Georgia, 20 to Kazakhstan and 3 to Ukraine. The amount of the sales was ca 2,7 million euros. In total ca 1300 beef cattle and ca 870 dairy cattle were sold to target markets.
